

INVESTMENT ABSTRACT

Fiscal Year 2013/2014

Preface by the Minister of State for Finance, Planning and Economic Development (Investments)

The last fiscal year, 2013/14, has once again seen Uganda making her mark as an attractive investment location, with 83 percent increase in the number of licensed projects from 2012/13. For the third year running the report reveals a growing trend in planned investment values. More projects became operational although actual investment values slowed down this Fiscal year. The FY saw a rapid growth of Ugandan projects, an indication of the emerging middle class seeking to usurp emerging investment opportunities. More targeted efforts are being directed towards Diaspora investments in the next five years. Both FDI and joint venture projects also grew during this Fiscal Year. Uganda is currently the second most attractive FDI recipient in the EAC region and the prospects for 2014 look bright with more investments expected in the Construction, Manufacturing and; Mining.

In 2013/14 there were some major activities carried out in the Kampala Industrial and Business Park Namanve. These included commissioning of Roofings Steel Rolling Mills, Victoria Seeds and the arrival of Three Ways Shipping a logistics company. Several other companies are at various stages of construction and are expected to commence operation in 2014/15.

Government's support for the private sector will continue and remains priority. More efforts will be directed at strengthening UIA as a one stop centre and streamlining various government licensing processes by creating a virtual one stop centre at the UIA.

Hon. Dr. Ajedra Gabriel Aridru, MP

Minister of State for Finance, Planning and Economic Development (Investments)

Foreword and Key Messages by the Executive Director of UIA

The 2013/14 Investment Abstract covers UIA licensed projects, planned investment, planned employment, investment by sector, source country, region and ownership. It also incorporates preliminary findings on actual investment and employment from ongoing investor surveys of licensed projects in the year under review. The report also summarizes Uganda's FDI performance in 2013 as reported by the World Investment Report 2014. Planned investment grew by 83 percent in 2013/14 to \$2.1 billion from \$1.1 billion in 2012/13. The positive performance was driven by the rapid growth in project numbers and large planned capital investment in Mining and Quarrying. Cayman Island for the first time emerged as the leading expected FDI source in 2013/14. Project implementation slowed down in 2013/14. Only 21 percent of the projects were operational by end of 2013/14. The investment conversion rate 2013/14 stood at 9 percent. An investigative survey to establish these causes is ongoing. By end of 2013/14, the operational projects had yielded US\$ 187 million actual capital investments. The investments were driven by Manufacturing, Financial services and Agriculture which collectively accounted for 70 percent of the actual investment. Manufacturing yielded \$70 million, Financial Services registered \$38.4 million while Agriculture attracted \$23 million. Out of the \$187 million, 48 percent of the investments were yielded by Ugandan projects (\$106 million). The Central region remained the top recipient of actual investment in 2013/14. In contrast, planned employment fell by 7 percent in 2013/14 to 60,197 planned jobs in 2013/14, from, 64,403 planned jobs in 2012/13. By end of 2013/14, 8,851 jobs had been yielded. Manufacturing was the top source of jobs in 2013/14 yielding 3,576 new actual jobs in 2013/14. Ugandan owned companies yielded 4,864 actual jobs. The central region again attracted majority jobs absorbing 6,776 new jobs in 2013/14.

We wish to extend appreciation to the UIA staff and management for facilitating investors. To our investors, we extend our utmost gratitude for choosing Uganda as your investment location. Investors are important partners in the production of this report since they provide us with the information and this additional role is most appreciated and we thank you.

Copies of this report are available at the UIA head office Plot 22 Lumumba Avenue and can also be accessed from www.ugandainvest.go.ug.

¹ FDI is controlling ownership in a business enterprise in one country by an entity based in another country. This is either by setting up a subsidiary or associate company in the foreign country, by acquiring shares of an overseas company, or through a merger or joint venture.

Summary

This Investment Abstract is the second annual edition from UIA which provides a summary of Uganda's investment performance based on the UIA database of licensed projects in Financial Year 2013/14. The abstract is intended to provide valuable information to policy makers to facilitate national planning and decision making in the various investment sectors. It also serves as a guide for further policy analysis and policy formulation. The information is also useful to investors to guide investment decisions and helps track FDI sources for Uganda.

Licensed Projects 2013/14

The overall investment performance as measured by the number of licensed projects for the Fiscal Year 2013/14 reflects a year on year growth. In 2013/14, the total number of licensed projects grew by 13 percent, to 461 projects from 408 projects in 2012/13. The positive change was driven by the rapid growth in the number of Ugandan owned projects and FDI projects particularly from India and China which jointly accounted for 38 percent of the total licensed projects in 2013/14. Ugandan owned projects accounted for 24 percent of the total licensed projects in 2013/14. The positive performance during the fiscal year matches the global economy recovery and improvement of the macroeconomic environment which attracted new investors seeking for markets and investment opportunities.

By end of the Financial Year 2013/14, 41 percent of the projects (188 projects) were not yet implementing compared with the 20 percent in 2012/13. 38 percent (175 projects), were under implementation while 21 percent (98 projects) were operational. Several reasons affected the operationalisation of projects during this financial year. These included lack of financing, compensation of squatters, delays in obtaining building plan approvals, delays in acquisition of plant and machinery and delays in obtaining work permit approvals.

Investment 2013/14

Planned investment grew by 83 percent in 2013/14 to \$2.1 billion from \$1.1 billion in 2012/13. The positive performance was driven by the rapid growth in the number of projects and large planned capital investment in Mining and Quarrying which registered \$748 million accounting for 36 percent of the total planned investment in 2013/14. For the first time, Cayman Island emerged as the leading planned FDI source by value registering \$620 million in 2013/14. China ranked second registering \$404 million in planned capital investment. A survey is on going to establish the investment status of all licenced projects in 2013/14. Preliminary findings of about 98 operational projects shows actual capital investment of \$187 million by the end of 2013/14. The actual capital investments were driven by Manufacturing, Financial services and Agriculture which collectively accounted for 70 percent of the actual investment. Finance, Insurance, Real estate and Business Services registered \$38.4 million; Agriculture attracted \$23 million while

Manufacturing attracted \$70 million. Out of the \$187 million, 48 percent of the investments were yielded by Ugandan projects (\$89 million). The Central region remained the top recipient of actual investment yielding \$149 million and attracting more than 70 percent of the projects in 2013/14.

Employment 2013/14

In contrast, planned employment fell in 2013/14 by 7 percent to 60,197 planned jobs from, 64,403 planned jobs in 2012/13. By end of 2013/14 the operational projects had generated 8,851 jobs. The leading sector by number of actual jobs created was manufacturing, generating 3,576 new jobs translating into 40 percent of actual jobs created in 2013/14. Ugandan owned companies yielded 4,864 jobs. The central region again attracted majority jobs 6,776 (76 percent of the jobs created in 2013/14.

1.0 OVER VIEW OF THE GLOBAL INVESTMENT TRENDS AND PROSPECTS 2013

Global foreign direct investment (FDI) inflows in 2013 rebounded by 9 percent to \$1.45 trillion in 2013 from \$1.33 trillion in 2012. The growth was driven by investments in developed and developing economies which jointly accounted for 93 percent of the total global FDI flows in 2013. Overall global FDI growth in 2015 and 2016 is projected to remain at high levels growing to about \$1.65 trillion and \$1.65 trillion respectively with the growth driven by investments in developed economies (UNCTAD World Investment Report, 2014).

1.1 Investment Trends by Economic Groupings

FDI flows grew in all economic groupings with the highest growth recorded by the developed economies. For the second year running, developing economies recorded the highest FDI growth compared to FDI absorbed by the developed economies. FDI flows to developing economies accounted for 54 percent of the global FDI estimated at \$778 billion compared with the 39 percent (\$567 billion) absorbed by developed economies. FDI flows to the transition economies accounted for 7.4 percent (\$108 billion). FDI flows to Africa grew by 4 percent to \$57 billion. Africa accounted for 3.9 percent of the total global FDI. FDI flows to Africa were driven by investments in Infrastructure, Information Technology, Tourism, Finance and Retail. Africa has also seen an increase in intra African investments mainly from Kenyan, Nigerian and South African Trans National Corporations. Similarly, FDI flows to LDCs remained positive growing by 17 percent to \$28 billion in 2013 from \$24 billion in 2012 driven by investments from India.

1.2 East African Community (EAC) FDI trends

For the third year running, the EAC continued to record growth in FDI inflows. FDI flows to the EAC grew by 6.3 percent to \$3.6 billion in 2013 from \$3.4 billion in registered in 2012. The overall growth was driven by FDI inflows to Kenya and Tanzania. Kenya's FDI inflows more than doubled in 2013 growing from \$259 million registered in 2012 to \$514 million in 2013. Kenya accounted for 14.2 percent of the FDI inflows to the EAC region in 2013. FDI flows to Kenya were driven by investments in Oil and Gas exploration activities, Manufacturing and Transport. FDI flows to Tanzania grew by 4.2 percent in 2013 compared with the 64 percent growth in 2012. Despite the sluggish growth in 2013, Tanzania remained the top FDI recipient in the EAC region attracting \$1.88 billion in 2013 accounting for 52 percent of the total FDI flows to the region. Uganda remained second attracting \$1.1 billion in 2013 accounting for 31 percent of the FDI flows to the region. The stagnating FDI flows to Uganda resulted from a decline in downstream activities in the Oil and Gas Sector. Similarly, FDI flows to Rwanda declined by about \$49 million to \$111 million in 2013 from \$160 million in 2012. Burundi remained the least recipient of FDI flows within the EAC accounting for 0.2 percent of FDI in 2013. Burundi however witnessed an increase in green field investments which grew to \$7 million in 2013 from \$ 1 million in 2012. The FDI flows to Burundi however remained lower than the \$14 million peak recorded in 2008 (Table 1.2).

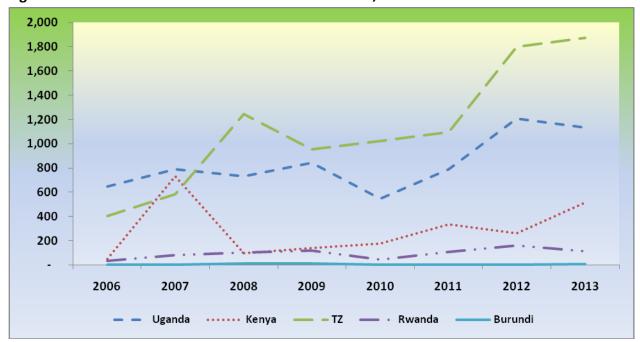

Table 1.2: FDI Flows to the EAC in millions of Dollars, 2006 – 2013

1.2.1 FDI flows to Uganda

FDI flows to Uganda have grown progressively since the 1990s from negative trends to over \$1 billion. In 2013 however, FDI flows stagnated recording \$1.1 billion from the \$1.2 billion peak registered in 2012 (Figure 1.3). The decline was attributed to slowed FDI flows from traditional

sources such as India. Investments were also affected by the fall in consumer demand in 2012/13 which resulted from the tight monetary policy stance which affected lending rates and access to private sector credit.

The FDI inwards stocks however have grown steadily from \$6 million in the 1990s reaching \$8.8 billion by 2013 (Figure 1.4). Uganda has recently become an important source of FDI to other countries especially Southern Sudan and Rwanda. In 2013, FDI outward flows from Uganda grew to \$1 million. The levels however, were lower than the \$4 million peak levels registered in 2010 (Figure 1.5). FDI outward stocks from Uganda grew upward to \$2 million in 2013.

Figure 1.3: FDI inflows to Uganda in million USD, 1990 – 2013

Source: UNCTAD, World Investment Report 2014

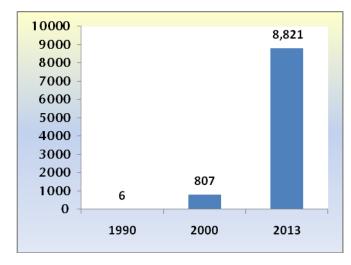

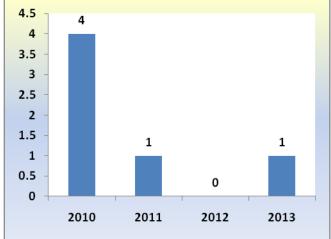

Figure 1.5: FDI flows from Uganda in million dollars 2010-2013

1.2.2 Total Investment as a percentage of GDP

Uganda's investment as a percentage of GDP has ranged between 23 – 25 percent since 2009/10. In 2013/14, the investment share to GDP grew slightly to 24 percent from 23.8 percent in 2012/13. The private sector continued to absorb the highest percentage of investment although the percentage fell to 17.3 percent in 2013/14 from 18.3 percent in 2012/13 (Figure 1.4). Similarly, public investment as a percentage of GDP grew from 5.5 percent in 2012/13 to 6.7 percent in 2012/13.

The investments expenditure in 2013/14 was driven by growth in industry activities particularly construction works and services mainly wholesale and retail trade a reflection of recovering private demand in the economy. Construction sector contributed 13.8 percent of the total GDP while wholesale and retail services contributed 12 percent to the total GDP in 2013/14.

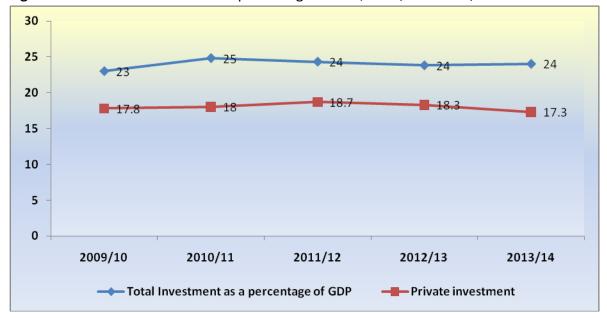

Figure 1.6: Private Investment as a percentage of GDP, 2009/10 - 2013/14

Source: MFPED, Background to the Budget 2014/15

2.0 LICENSED PROJECTS

The overall investment performance as measured by the number of licensed projects for the Fiscal Year 2013/14 reflects a year on year growth. In 2013/14, the total number of licensed projects grew by 13 percent, to 461 projects from 408 projects in 2012/13. The growth was driven by a rise in the number of FDI projects particularly from India and China which jointly accounted for 38 percent of the total licensed projects in 2013/14. Ugandan owned projects (including JVs), also grew strongly accounting for 27 percent of the total licensed projects in 2013/14. The positive performance during the fiscal year matches the global economy recovery and improvement of the macroeconomic environment which attracted new investors seeking for markets and investment opportunities. Figure 2.1 shows the trend of licensed projects in the last 5 fiscal years.

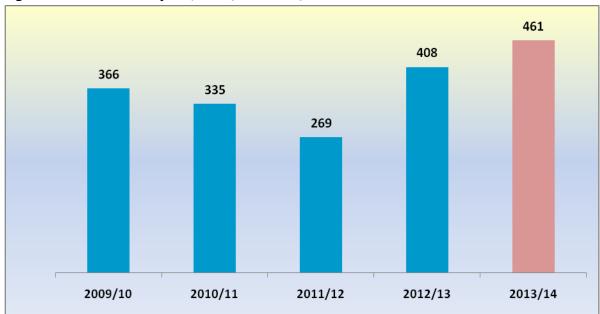

Figure 2.1: Licensed Projects, 2009/10 - 2013/2014

Source: Uganda Investment Authority database

2.1 Implementation Status of the Projects

By end of the Financial Year 2013/14, 41 percent of the projects (188 projects) were not yet implementing. 38 percent were under implementation (175 projects) while 21 percent of the projects were operational as shown in Table 2.1. Several reasons affected the operationalisation of projects during this financial year. These included lack of financing, compensation of squatters, delays in obtaining building plan approvals, delays in acquisition of

plant and machinery and delays in obtaining work permit approvals. Other investors found their businesses non feasible and were in the process of diverging their business plans.

During 2013/14 operational and non operational projects grew in number with the fastest growth recorded among those projects that were not yet implementing. These grew by 129 percent to 188 projects in 2013/14, from 82 projects in 2012/13. Operational projects grew by 7 percent to 98 projects in 2013/14, from 92 projects recorded in 2012/13. Projects under implementation declined in 2013/14 by 25 percent to 175 projects from 234 projects licensed in 2012/13.

Table 2.1: Distribution of Licensed projects by Status 2010/11-2013/14

Source: Uganda Investment Authority database

The five year trend of licensed projects shows a steady growth in the number of operational projects since 2011/12 (Figure 2.2). The Investor Survey 2011 conducted by MFPED, UBOS and UIA between 1991 and 2010 reported that survival rates of UIA licensed projects is at 46 percent and about 60.8 of the projects become operational in the same year, 21.9 commence after one year, 8.8 percent after 2 years while the rest take off after a period of over 3 years.

The main reasons for delays in take off relate mainly to lack of start up capital, delays associated with construction of business premises and processing of requisite documentation.

Figure 2.2: Trend of licensed Projects by project status, 2010/11 - 2013/2014

2.2 Regional Distribution of Licensed Projects

FY 2013/14 saw a decline in the number of licensed projects in the Eastern and Western regions. In contrast, the Central region registered an increase in projects by 20 percent to 381 projects in 2013/14 compared with 318 projects in 2012/13. Similarly projects in the North grew from 23 registered in 2012/13 to 28 projects in 2013/14.

The Central region maintained its position as the top destination of projects by number as shown in Table 2.2. The region attracted 381 projects in 2013/14 accounting for 83 percent of the total licensed projects. The other 3 regions collectively accounted for 17 percent of the total projects in 2013/14 with the least projects recorded in the Western region which accounted for 5 percent compared with the Eastern and Northern regions which accounted for 6 percent.

Kampala Capital City dominated the projects in the central region attracting 67 percent (306 projects) of the total projects licensed in the 2013/14 as shown in Figure 2.2 Wakiso district ranked second attracting 7 percent (34 projects) of the total projects in 2013/14 while Mukono district attracted 21 projects accounting for 5 percent of the projects. Other districts in the region attracted about 3.9 percent of the projects (figure 2.3).

The trend in project distribution is a continued reflection of the concentration of projects in locations with available physical amenities such as roads, electricity, financial services, hospitals, schools in addition to the availability of market and middle income earners.

The regional distribution of projects is shown in Table 2.2 below while Figure 2.3 illustrates project distribution in the central region.

Table 2.2: Annual Distribution of Licensed Projects by Region

2.3 Project Distribution by Ownership

FY 2013/14 registered an increase in the number of foreign, domestic and jointly owned projects. Foreign owned projects still dominated in number during FY 2013/14 accounting for 68 percent of the total licensed projects (Table 2.3). The Foreign projects grew by 3 percent to 311 projects in 2013/14, from 301 projects in 2012/13. Domestic/local owned projects grew by 47 percent reaching 110 projects in 2013/14 from 75 projects licensed in 2012/13. The rapid growth is an indication that domestic investors are beginning to realise the full benefits of an Investment License. Domestic projects accounted for 24 percent of the total projects in 2013/14. Joint ventures grew by 25 percent to 40 projects in 2013/14 from 32 projects in 2012/13. Joint ventures accounted for the least projects contributing 9 percent in 2013/14 compared with 18 percent in 2012/13. Joint ventures recorded during 2013/14 were dominated by Ugandan projects which accounted for 35 percent of the joint ventures.

India attracted 15 percent of the joint ventures while China accounted for 13 percent of the joint ventures.

2.4 Distribution of FDI Licensed Projects by source country

Asia remained the top source for FDI projects accounting for 60 percent of the total FDI projects in 2013/14. FDI projects from Asia grew by 12 percent to 201 projects in 2013/14, from 180 projects recorded in 2012/13. The FDI projects from Asia were dominated by India. India alone accounted attracted 121 projects.

Projects from other African countries also grew in number by 50 percent to 45 projects in 2013/14 from 30 projects registered in 2012/13. The region accounted for 13.4 percent of the FDI projects and these projects were mainly from Eritrea which registered 17 projects.

During 2013/14, Europe was Uganda's third source of FDI projects accounting for 13 percent of the total FDI projects. The number of projects however declined by 25 percent to 44 projects in 2013/14 from 59 projects recorded in 2012/13. United Kingdom was the top source of projects from Europe. The total projects from UK were 22.

The Middle East and North America tied in the fourth position attracting 16 projects each. Although the number of projects from the Middle East grew by 60 percent projects in 2013/14 North America did not register growth. Turkey dominated the projects from the Middle East while United States dominated the projects from North America.

The East African Community partner states accounted for 4 percent of the total FDI projects in 2013/14. Projects from EAC partner states reduced however by 39 percent to 14 projects in 2013/14 from 23 projects registered in 2012/13. The reduction was driven by a fall in the number of projects from Kenya. In addition, only two out of four East African Community partner states (Kenya and Tanzania), registered projects during 2013/14. Other EAC states (Burundi and Rwanda) did not register any projects this financial year. More marketing efforts are required in the region to attract more FDI given Uganda's strategic location to feed into the regional markets such as Southern Sudan and Democratic Republic of Congo.

2.5 Sectoral Distribution of licensed Projects (by number)

Manufacturing and Finance, Insurance, Real estate and Business Services remained the most attractive sectors by number of licensed projects in 2013/14. The Manufacturing sector attracted 209 projects accounting for 45 percent of the total projects.

Fig 2.6: Licensed Projects by Sector FY 2013/14

Finance, Insurance, Real Estate and Business Services registered 102 projects accounting for 22 percent of the projects. Agriculture followed in the third position attracting 40 projects translating into 9 percent of the total projects. The Construction sector emerged fourth with 37 projects accounting for 8 percent of the total projects. Wholesale, Retail, Accommodation and Catering services and Transport, Storage and Communication registered 18 projects each accounting for 4 percent of the total projects in 2013/14. Mining and Quarrying registered 15 projects accounted for 3 percent of the total licensed projects. Electricity, Gas and Water attracted 14 projects. Community and social services attracted the least number of projects in 2013/14. These were 8 projects translating into 2 percent of the total projects.

Majority of the sectors registered positive growth in the number of projects during 2013/14 with only two sectors registering a decline. Transport, Storage and Communication registered the fastest growth of 80 percent in 2013/14. Finance, Insurance, Real Estate and Business Services emerged second growing by 59 percent. Construction services grew by 42 percent while Electricity, Gas and Water recorded 27 percent growth. Manufacturing recorded 7 percent growth while Agriculture grew by 3 percent.

The two sectors that registered a decline in project numbers were Community and Social Services and; Mining and Quarrying. The decline registered was 62 percent and 17 percent respectively.

Table 3.5: Sectoral Distribution of licensed Projects 2010/11-2013/14 (Percentage change)

| | 2010/11 | 2011/12 | 2012/13 | 2013/14 | % change |
|---------------------------------|---------|---------|---------|---------|----------|
| Agriculture | 54 | 36 | 39 | 40 | +3% |
| Community and Social Services | 4 | 9 | 21 | 8 | -62% |
| Construction | 30 | 12 | 26 | 37 | +42% |
| Electricity, Gas and Water | 6 | 11 | 11 | 14 | +27% |
| Finance, Insurance, Real estate | 97 | 59 | 64 | 102 | +59% |
| and Business Services | | | | | |
| Manufacturing | 129 | 95 | 195 | 209 | +7% |
| Mining and Quarrying | 14 | 17 | 18 | 15 | -17% |
| Transport, Storage and | 15 | 10 | 10 | 18 | +80% |
| Communication | | | | | |
| Wholesale, Retail, Catering and | 22 | 20 | 24 | 18 | -25% |
| Accommodation Services | | | | | |
| Total | 371 | 269 | 408 | 461 | |

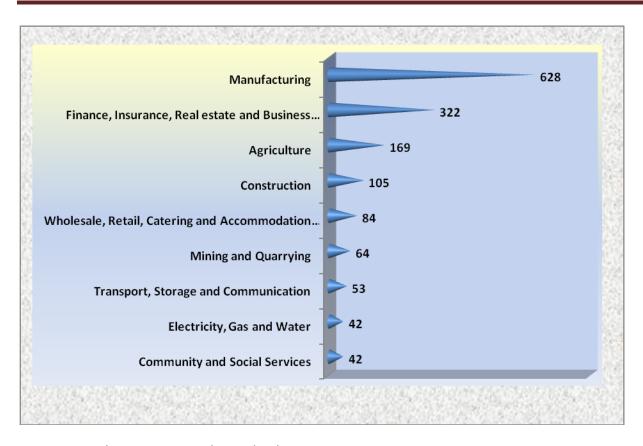

An analysis of the 5 year trend in project distribution shows Manufacturing as the most attractive sector. Finance, Insurance, Real Estate and Business Services followed attracted 322, Agriculture 169 projects, Construction 105 projects, Wholesale, Retail, Catering and Accommodation services 84 projects.

Mining and Quarrying has attracted 64 projects, Transport, Storage and Communication 53 projects while Electricity, gas and water and, Community and Social services have attracted equal number of projects standing at 42.

Figure 2.7 below illustrates the total number of projects registered by sector since 2010/11 to 2013/14.

Fig 2.7: Five Year Sectoral Cumulative values by Project Number (2010/11-2013/14)

3.0 PLANNED INVESTMENT VS ACTUAL INVESTMENT

An investigative survey is on going to establish the investment status of all licenced projects in 2013/14. Preliminary findings of about 98 operational projects shows actual capital investment of \$187 million by the end of 2013/14. Actual capital investments were driven by manufacturing, financial services and agriculture which collectively accounted for 70 percent of the actual investment. Finance, Insurance, Real estate and Business Services registered \$38.4 million; Agriculture attracted \$23 million while Manufacturing attracted \$70 million.

Planned investment grew by 83 percent in 2013/14 to \$2.1 billion from approximately \$1.1 billion in 2012/13 (Figure 3.1). The positive performance was driven by the growth in the number of licenced projects and large planned capital investment especially in Mining and Quarrying which registered \$748 million in 2013/14.

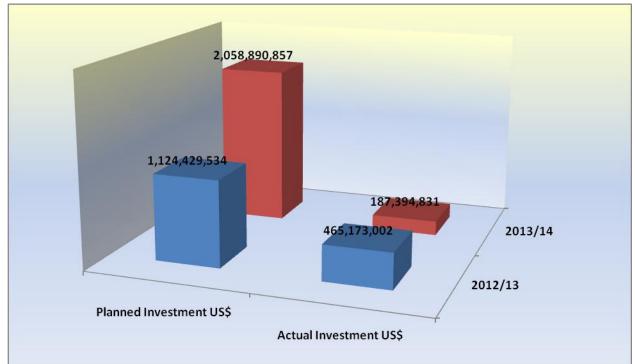

Figure 3.1: Planned Vs Actual Investments in million US\$ (2012/13 - 2013/14)

Source: Uganda Investment Authority database

Investment Conversion

The domestic actual investments realised by end of 2013/14 were estimated at \$106.3 million compared with \$ 342 million in planned investment (Table 3.1). The conversion rate was 31 percent higher than the conversion rates for Joint ventures and foreign companies. The average capital investments portfolio per domestic project was estimated at 965,950 higher than the

rest of the categories. The positive performance for domestic investments was driven by investments in Manufacturing and Agriculture during the first quarter of 2013/14. Joint ventures realised \$7.3 million in actual investments out of the \$246 million planned capital investments in 2013/14. The investment conversion rate stood at 3 percent while the investment portfolio per project was 182,642. Foreign actual investments stood at \$73.8 million out of the \$1.47 billion planned investment by end of 2013/14. The investment conversion rate was 5 percent. Average investment per project for the foreign companies was 237,408. The actual investment per project in 2013/14 was \$4.5 million while the investment conversion rate for 2013/14 stood at 9 percent as shown in Table 3.1 below.

3.1 Sectoral Distribution of Planned and Actual Investment

Financial Year 2013/14 saw an increase in planned investments across majority sectors with the highest growth recorded in Construction and; Mining and Quarrying. In contrast, Finance, Insurance, Real Estate and Business services sector declined by 45 percent. Mining and Quarrying continued to grow strongly registering its peak at US\$ 748 million and recording the highest planned investment in 2013/14. The sector accounted for 36 percent of the total planned investment in 2013/14. Planned investments in the sector were driven by a large mining project investing in the production of phosphates in Sukuru Tororo district. By the end of June 30, 2014, few projects in the sector had commenced operation investing \$82,000 which was the least in comparison with all sectors as shown in the table 3.3 below. Manufacturing ranked second growing by 26 percent to reach \$587 million planned investment in 2013/14. The growth however was 18 percent below the peak recorded in 2009/10. Actual investment in Manufacturing during 2013/14 was estimated at \$70 million which was the highest in 2013/14. Despite the decline in the growth of planned investment values, Finance, Insurance Real Estate and Business Services sector attracted the third largest planned investment estimated at \$191 million accounting for 9 percent of the total planned investment in 2013/14. The planned value in the sector however, was a decline compared to more than 100 percent growth recorded in

2012/13. Finance, Insurance, Real Estate and Business Services registered \$38.4 million in actual investment. Investments in the sector were driven by the real estate activities.

The Construction sector rebounded strongly in 2013/14 registering \$112 million in planned investment up from \$ 10 million accounting for 5 percent of the total planned investment in 2013/14. Construction registered \$18 million in actual investment during 2013/14. Similarly planned investments in Agriculture rebounded registering \$ 111 million in 2013/14 up from 109 million registered in 2012/13. Actual investment in Agriculture was \$23 million driven by large investments recorded during quarter 1 2013/14. Community and social services grew by 29 percent during 2013/14, driven by investments in health care services. Planned investments were \$92 million up from \$71.4 million recorded in 2012/13. The sector yielded an estimated \$14 million by end of June 2013/14 (Table 3.3). Transport, Storage and Communication registered \$41 million planned investment in 2013/14 up from \$17.4 million in 2012/13. Transport, Storage and Communication registered \$3.5 million actual investments. Planned investment in Electricity, Gas and Water were \$146 million in 2013/14 up from \$19 million recorded in 2012/13. Actual investments registered in the sector were \$12.4 million in 2013/14. Wholesale, Retail, Catering and Accommodation Services attracted the least planned investment estimated at \$31 million, out of which \$9.2 million was realized by end of 2013/14.

Table 3.2: Planned Investment '000 US \$, by Sector 2009/10-2013/14

3.2 Regional Distribution of Investment

3.2.1 Planned Investment by region

FY 2013/14 recorded growth in planned investment values for the Central and Eastern regions with a decline in the expected capital investments for the Northern and Western regions (table 3.4

Table 3.4: Planned Investment in '000 US \$, by Region (2009/10 – 2013/14)

| | 2009/10 | 2010/11 | 2011/12 | 2012/13 | 2013/14 |
|----------|-----------|-----------|---------|---------|-----------|
| Central | 1,233,864 | 781,641 | 710,319 | 740,935 | 1,091,719 |
| Eastern | 191,738 | 176,190 | 598,703 | 169,917 | 816,953 |
| Northern | 9,656 | 10,719 | 23,284 | 87,236 | 55,475 |
| Western | 278,584 | 1,080,896 | 142,158 | 126,341 | 94,744 |

Source: *UIA database*

The Central region attracted the largest share reaching a new high at \$1.1 billion, accounting for 53 percent of the total planned investment in 2013/14. Planned investments were driven by the 20 percent growth in licensed projects in the region. Within the Central region, Kampala capital city absorbed the largest share of planned investment accounting for 32 percent of the total planned investment (\$669 million) in 2013/14. Wakiso district followed attracting 7 percent (\$133 million) of the total planned investment. Other top recipients in the central

region included Mukono (\$86 million), Kayunga (\$116 million), and Mityana (\$52 million). Similarly, planned investment in the Eastern region rebounded growing sharply by about 647 million to a peak of \$817 million in 2013/14 from \$170 million in 2012/13. Tororo, Jinja and Iganga were the investment drivers in the region. Tororo district alone attracted \$681 million (33 percent) of the total planned investments while Jinja and Iganga districts collectively registered \$125 million accounting for 6 percent of the total planned investment. In contrast, planned investment in the Northern region fell by about 36 percent from \$87.2 million in 2012/13 to \$56 million in 2013/14 despite growth in the number of licensed projects. The region attracted 3 percent of the total planned investment in 2013/14. The effects of the conflict in Southern Sudan could have affected investments in Northern Uganda. Nwoya district was the top recipient of planned investment estimated at \$40 million. The district attracted 71 percent of the planned investments in Northern Uganda. Traditional recipients of investments in the northern region such as Lira, Gulu, and Arua collectively attracted \$13.8 million with the largest investment (\$7.3 million) registered in Lira district while Gulu attracted \$5 million and Arua district attracted \$ 1.5 million. Similarly planned investments in Western Uganda shrank by 25 percent to \$95 million in 2013/14. The decline resulted from a reduction in the number of licensed projects in the region. Western region accounted for the least number of projects in 2013/14. The main recipient of investments in the region was Kasese district which absorbed \$ 44 million accounting for 17 percent of the total planned investment in 2013/14. See appendix VI for the distribution of planned investment in each district.

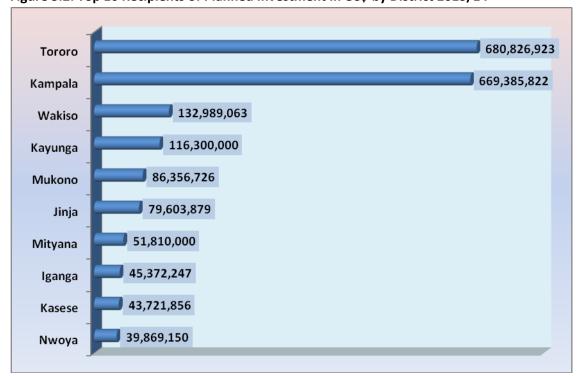

Figure 3.2: Top 10 Recipients of Planned Investment in US\$ by District 2013/14

3.2.2 Regional distribution of Actual Investment

Actual investments in 2013/14 remained concentrated in the Central region which registered \$149 million accounting for 80 percent of the actual investments. The Western region ranked second registering \$28 million in actual investment accounting for 15 percent of the total actual investments. The northern region recorded \$8 million while the Eastern region realized \$2 million. FY 2013/14 saw a general slump in project implementation due to lack project financing, land resettlement of squatters and land compensation, delays in acquisition of various permits and business licenses and delays in acquisition of suitable agricultural land. The partial closure of the land registry in the first half of 2013 also affected some projects.

Table 3.5: Regional Distribution of Actual Investment in US dollars (Quarter 1 – 4), 2013/14

| | Quarter 1 | Quarter 2 | Quarter 3 | Quarter 4 | Total 2013/14 |

3.3 Investment Value by Ownership

3.3.1 Domestic Direct Investment

In 2013/14, planned domestic direct investment values rebounded, growing by 31 percent recording \$342 million in 2013/14 up from \$262 million recorded in 2012/13. The overall increase in planned DDI was attributed to the rapid growth in the number of licensed domestic projects. The growth falls in line with the UIA strategic objective of increasing domestic investments in Uganda.

Figure 3.3: DDI Inflows in US Dollars, 2009/10 - 2013/14

Source: UIA database 2014

3.3.1.1 Sectoral Distribution of DDI by value in US\$

Planned DDI grew across most sectors in 2013/14 with a decline in only 2 sectors – Community and social services and financial services. The growth was mainly driven by the Construction sector.

Planned DDI to the Manufacturing sector remained at high levels growing by 34 percent reaching \$151 million in 2013/14 from \$113 million in 2012/13. The sector accounted for 44 percent of the total planned DDI in 2013/14. DDI in Manufacturing was driven by the rebound in number of projects which stood at 54 out of 111 domestic projects in 2013/14. The percentage growth however remained lower than the historic peak registered in 2010/11. The Agricultural sector had the second largest planned domestic investment growing to \$70 million in 2013/14 from \$13 million registered in 2012/13. The growth is a reflection of an increasing interest by the domestic investors in large commercial agricultural projects. Planned DDI in Transport, Storage and Communication grew to \$29 million in 2013/14 from \$3 million in 2012/13. The growth was driven by planned investments in Transport and Logistics services. Construction sector rebounded in 2013/14 after a decline registered in the past 2 consecutive years. In 2013/14 the sector DDI took an upward turn reaching \$28 million from 956 thousand in 2012/13. Domestic investors plan to invest in building activities. Community and social services sectors registered \$21 million in 2013/14 a decline, from \$37 million in the previous financial year. Finance, Insurance, Real Estate and Business services registered \$18 million in 2013/14 down from \$42 million registered in 2012/13. The decline was because few domestic companies registered projects in real estate activities. Mining and Quarrying attracted \$12 million in 2013/14 an increase from \$7.3 million registered in 2012/13. Wholesale, Retail, Catering and Accommodation services registered \$8 million in 2013/14 from \$4 million in 2012/13. The planned investments were driven by planned tourism investments, an indication of the positive response by locals to invest in tourism activities. The least attractive sector for the Ugandans was Electricity, Gas and Water which attracted \$6 million in 2013/14. This however was an increase from \$4 million registered in 2012/13.

DDI in 2014/15 is expected to continue growing moderately following the slight improvement in the lending rates which are anticipated to spur private investment especially in manufacturing, and agriculture. Figure 3.4 below illustrates the sectoral distribution of domestic owned projects which indicate that most planned investments in 2013/14 remained concentrated in the Manufacturing and Agricultural sector.

3.3.2 Foreign Direct Investment Inflows (Planned)

In 2013/14, planned FDI grew rapidly to \$ 1.5 billion from \$665 million registered in 2012/13. For the first time ever, Cayman Islands drove the planned FDI registering 42 percent of the FDI in 2013/14. Planned FDI inflows are expected to grow further in 2013/14 with the registration of green field investments especially in Mining and Quarrying and; Manufacturing.

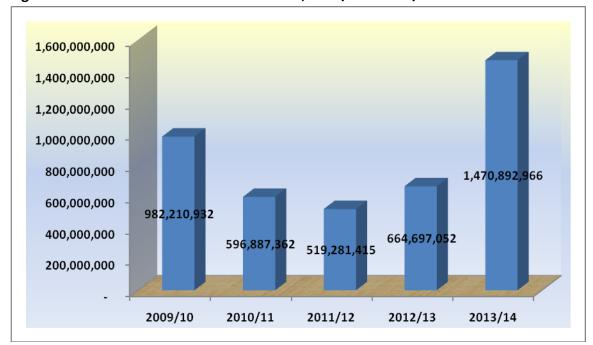

Figure 3.5: Planned FDI Inflows in US dollars, 2009/10 - 2013/14

Source: UIA Database, 2014

3.3.2.1 Sources of Foreign Direct Investment (FDI) by value

Cayman Islands, China and United Kingdom were leading sources of FDI in 2013/14. Cayman came first for the first time ever in 2013/14 attracting \$620 million. The positive performance was driven by a large project registered in Mining and Quarrying. In particular, Cayman alone accounted for 42 percent of the total planned FDI in 2013/14. China maintained the second position in 2013/14 registering \$404 million higher than the planned FDI value registered in 2012/13 accounting for 28 percent of the total planned FDI. United Kingdom ranked third registering an estimated with \$136 million accounting for 9 percent of total planned FDI. India followed with \$110 million in planned investment maintaining the fourth position in 2013/14 up from the \$90 million registered in 2012/13. In the previous year the top three frontrunners were Canada, China and Kenya, which invested \$144 million, \$132 million and \$97 million respectively. Italy came fifth attracting \$ 84 million in 2013/14. Kenya maintained its position in the top ten but slipped to the sixth position in 2013/14 attracting \$72 million. These rankings

3.3.2.2 Sectoral distribution of Planned FDI flows by Value in US\$

Planned FDI flows in 2013/14 grew across sectors but slipped in Wholesale, Retail, Catering and Accommodation Services, Agriculture and Finance, Insurance, Real Estate and Business services. The top three recipients of planned FDI by value were Mining and Quarrying, Manufacturing and Finance, Insurance, Real Estate and Business Services. Mining and Quarrying hit a record high of \$714 million accounting for 49 percent of the total planned FDI in 2013/14. Planned FDI

in the Manufacturing sector grew moderately by 0.1 percent reaching \$260 million, accounting for 18 percent of the total planned FDI. Finance, Insurance, Real Estate and Business Services attracted \$185 million accounting for 12 percent of total planned FDI a decline by 14 percent from the previous financial year. Planned FDI in Electricity, Gas and Water continued to grow rapidly reaching \$141 million in 2013/14 up from \$15 million in 2012/13. Similarly planned FDI in Construction grew in 2013/14 to reach new levels of \$62 million higher than the value recorded in 2009/10. Community and Social Services recorded \$57 million up from \$24 million in 2012/13. Planned FDI in agriculture dropped by 58 percent in 2013/14 to \$39 million from \$ 93 million in 2012/13. Planned FDI in Transport, Storage and Communication grew to \$ 11 million in 2013/14. Whole, Retail, Catering and Accommodation Services reversed growth to \$2.1 million in 2013/14 from \$7 million in 2012/13. Similar to 2012/13, planned FDI investment levels in the sector, have remained at low levels in comparison to other sectors recording the least value in 2013/14. The sector is expected to attract more investments in 2014/15 especially in Tourism related activities in response to the ongoing promotion efforts by government to increase FDI in Tourism. In terms of growth, the promising sectors for FDI were Mining and Quarrying, Electricity, Gas and Water and; Construction which recorded the highest growth levels in 2013/14.

3.3.2.2 Sectoral Distribution of Foreign owned Projects

With respect to the sectoral distribution of foreign licensed projects, the Manufacturing sector maintained its position as number one accounting for 47 percent of the projects in 2013/14. The projects however declined in number by 9 percent to 140 projects in 2013/14 from 154 projects registered in 2012/13. Finance, Insurance, Real Estate and Business Services maintained the second position registering 78 projects in 2013/14 from 52 projects in the previous financial year. The Construction sector followed with 30 projects while Agriculture registered 20 FDI projects. Electricity, Gas and Water attracted 11 projects. Wholesale, Retail, Catering and Accommodation services, Transport Storage and Communication and Mining and Quarrying attracted 9 projects each. Community and Social services attracted the least number of FDI projects.

Table 3.10 illustrates the sectoral distribution of FDI for the five fiscal years which confirms that most foreign owned projects tend to concentrate in the Manufacturing, Finance, Insurance, Real Estate and Business Services, Construction and; Agriculture.

Fig. 3.8: Five Year Sectoral Cumulative values of FDI Projects by Number (2010/11-2013/14)

4.0 PLANNED EMPLOYMENT VS ACTUAL EMPLOYMENT

FY 2013/14 witnessed 7 percent decline in planned jobs to 60,197 jobs in 2013/14 from 64,403 jobs in 2012/13 (Figure 4.1). In contrast, actual employment created by operational projects by end of June 2014 stood at 8,851 jobs compared with 5,402 jobs generated by operational projects by end of FY 2012/13. Employment conversion rate for 2013/14 was 15 percent. The growth in actual employment was driven by the Manufacturing sector which generated 3,576 new jobs translating into 40 percent of actual jobs created in 2013/14. Figure 4.2 below illustrates the distribution of planned jobs and actual jobs in the 2013/14.

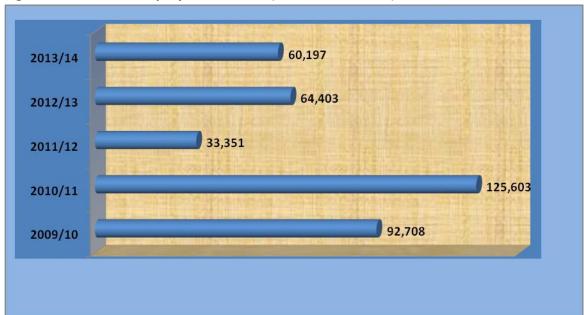

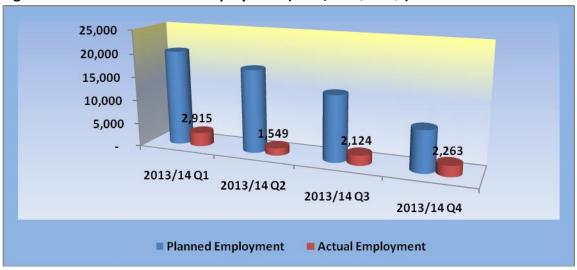

Figure 4.1: Planned Employment trends (2009/10-2013/14)

4.1 **Employment Conversion**

During the 2013/14, domestic companies yielded the largest number of jobs. The companies generated 4,864 actual jobs out of the 13,384 planned jobs (Table 3.1). Foreign companies ranked second yielding 3,398 actual jobs out of 41,458 planned jobs in 2013/14. Joint venture companies generated 589 jobs out of 5,355 planned jobs. The employment conversion rate in 2013/14 was 15 percent. This means that on average, every licensed project generated at least 15 percent of the total planned jobs at the time of licensing. The employment conversion rate was higher in domestic companies which yielded 36 percent of the planned jobs. The summary is illustrated in table 4.1 below.

Domestic Foreign JV Total 41,458 Planned Jobs at Licensing 13,384 5,355 60,197 Actual jobs 4,864 3,398 589 8,851 **Employment Conversion ratio (percent)** 36 8 11 15 Average actual jobs per project 122 11 15 19

Table 4.1: Planned Vs Actual Employment by project Ownership 2013/14

4.2 **Employment Distribution by Ownership**

The year 2013/14 saw a reverse in the planned jobs among foreign projects registering a fall by 12 percent to 41,458 planned jobs in 2013/14 from 47,115 planned jobs in 2012/13. Similarly employment distribution among domestic projects fell 6 percent to reach 13,384 jobs in 2013/14 from 14,213 jobs registered in 2012/13. In regard to planned jobs, foreign companies maintained their top position in 2013/14 accounting for 69 percent of the planned jobs. The positive performance by foreign companies is parallel to the number and value of foreign investment which outstripped the domestic projects during the financial year under review.

Fig. 4.3: Employment Distribution by Foreign & Domestic Projects, 2009/10-2013/14

4.2.1 Employment distribution by source Country

Ugandan owned companies continue to be major sources of jobs. In 2013/14, the licenced projects plan to create 14,408 jobs accounting for 24 percent of the total planned jobs. By the end of 2013/14, 34 percent of the jobs had been actualised (4,864 jobs). China remained the top foreign source of planned jobs estimated at 21,040 (35 percent) of the total planned jobs. India followed registering 8,402 planned jobs. United Kingdom ranked third registering 5,131 in planned employment while Kenya ranked fourth with planned employment of 1,355 persons. Table 4.2 below illustrates planned jobs by source country in 2013/14.

4.3 Employment Distribution by Sector

4.3.1 Planned Jobs by Sector

The year 2013/14 saw a general increase in the number of jobs created by majority sectors with a decline in 4 sectors. The largest growth was recorded in the Mining and Quarrying and; Electricity, Gas and Water sector. In contrast, manufacturing registered the largest decline in planned jobs although recorded the largest number of planned jobs in 2013/14.

Planned jobs in Manufacturing stood at 17,782 in 2013/14 compared with 40,299 planned jobs recorded in 2012/13. The Mining sector ranked second registering 13,622 planned jobs accounting for 23 percent of the jobs to be generated. Finance, Insurance, Real Estate and Business Services ranked third recording 8,322 planned jobs accounting for 14 percent of the total planned jobs higher than the 5 percent in 2012/13 reflecting positive growth in the jobs to be created in the sector. Construction accounted for 11 percent of the jobs.

Construction registered rapid growth in the number of planned jobs to 6,725 planned jobs in 2013/14 from 2,992 planned jobs in 2012/13. Agriculture registered 6,295 planned jobs in

2013/14 compared with 12,304 planned jobs in 2012/13. Electricity, Gas and Water registered 4,130 planned jobs in 2013/14 compared with 469 planned jobs in 2012/13.

Transport, Storage and Communication registered 1,431 planned jobs in 2013/14, an increase from 549 planned jobs in 2012/13. Community and Social services recorded 1,145 planned jobs a fall by 41 percent from 1,977 planned jobs in 2012/13. Planned employment in the Wholesale, Retail, Catering and Accommodation sector declined by 38 percent in 2013/14 recording 745 planned jobs down from 1,042 planned jobs in 2012/13.

4.3.2 Actual Employment by sector

The top source of actual jobs in 2013/14 was manufacturing which created 3,576 jobs, accounting for 40 percent of the total jobs. Agriculture ranked second creating 1,692 jobs accounting for 19 percent of the total jobs. Finance, Insurance, Real Estate and Business Services generated 1,052 actual jobs followed by Electricity, Gas and Water creating 999 jobs. Construction sector generated 849 jobs. Community and Social Services created 314 jobs while Wholesale, Retail, Catering and Accommodation generated 190 jobs. Transport, Storage and Communication yielded 155 jobs.

Majority of the projects in Mining and Quarrying had not commenced operation by end of 2013/14 affecting the number of actual jobs in the sector. The sector generated 24 new jobs. Table 4.4 below illustrates the actual jobs yielded by sector in 2013/14.

4.4 Employment Distribution by Region

4.4.1 Planned Employment by region

Planned employment remained concentrated in the Central region which attracted 68 percent of total planned jobs in 2013/14. The region also witnessed a reverse after a three year consecutive downward trend growing by 66 percent to 41,142 jobs from 24,810 planned jobs in 2012/13. Planned employment fell in the rest of the regions. The eastern region registered 10,344 planned jobs in 2013/14 a decline by 24 percent from 13,683 planned jobs in 2012/13. The region accounted for 17 percent of the total planned employment. Northern region recorded 2,421 planned jobs in 2013/14 down by 86 percent from 16,753 planned jobs in 2012/13. The western region also declined by 31 percent to 6,290 planned jobs in 2013/14. The region accounted for 11 percent of total planned jobs.

4.4.2 Actual Employment by Region

The Central region was the top recipient of actual jobs during 2013/14. The region generated 6,776 jobs accounting for 77 percent of the actual jobs during 2013/14. The Western region ranked second attracting 1,361 jobs out of the 6,061 planned jobs in 2013/14. The Northern region emerged third attracting 610 actual jobs out of 2,421 planned jobs. Majority of licensed projects in the Eastern region had not started operations by end of 2013/14 which affected the jobs created in the region. By end of 2013/14 the few operational projects in the region had generated 104 actual jobs.

Several reasons affected project implementation and these are discussed in section five (5) of this report. Figure 4.4 and figure 4.5 below show that planned employment and actual employment in 2013/14 was concentrated in the central region.

Table 4.6: Actual Employment Distribution by Region Q1 - Q4 2013/14

| | Quarter 1 | Quarter 2 | Quarter 3 | Quarter 4 | Total |
|----------|-----------|-----------|----------------|-----------|-------|

5.0 BUSINESS IMPLIMENTATION, CONCLUSION AND FORECASTS

5.1 Barriers to Business Implementation in 2013/14

By the end of 2013/14, not all the licensed projects had commenced operation. A routine survey undertaken by the UIA to establish causes of delays in project implementation pointed to several factors. These included financing, resettlement of squatters and land compensation, delays in acquisition of building plan approvals and work permits for directors while others were looking for large pieces of agricultural land free of squatters.

Other respondents expressed concerns with the fluctuation of the Uganda shilling which affected those that were importing plant and machinery. High taxation mainly Value Added Tax on imports was reported as a concern by investors in Manufacturing, Finance, Insurance, Real Estate and Business services. Investors in Agriculture were affected by the newly introduced VAT charges on agricultural inputs. The lack of skilled manpower mainly in Tourism and Manufacturing was also reported. Some investors reported challenges related to poor infrastructure mainly roads leading to their premises, power outages and limited land for expansion. Some investors were carrying out feasibility studies for their projects. Other projects however were under implementation and investors were in the process of shipping plant and machinery while others were at the construction stage of their premises. The past economic trends continued to impact on the cost of doing business for companies that had started operation. Inflationary pressures particularly high prices reduced disposal income and affected consumer demand for their goods and services. Investors in financial services for instance reported that borrowers were struggling and frequently defaulting on their loan repayment schedules. The volatility in market interest rates and central bank rate also affected the cost of borrowing for investors in financial services. As a result, this cost had been transferred to borrowers which consequently impacted on access to financing for private investment.

5.2 Conclusion

FY 2013/14 registered an 83 percent growth in planned investment partially driven by the positive growth in the number of licensed projects. Unlike 2012/13, some projects licensed in 2013/14 had large planned investment capital. The largest project in 2013/14 had about 30 percent of the total planned investment for 2013/14 (about 620 million) and the project was recently commissioned.

Although planned investment was higher in 2013/14, few projects (21 percent) were operational by end of the Fiscal year and this consequently affected actual investment for 2013/14. By end of 2013/14 operational projects had yielded \$187 million. The actual

investment were driven by investments in Manufacturing. In 2013/14, for the first time Cayman Islands was the leading source of planned FDI by value surpassing traditional sources UK, India and China. The positive performance was driven by planned investment in phosphates. Cayman alone accounted for 30 percent (\$620 million) of the total planned investment by value 2013/14. China ranked second with planned investments of \$404 million accounting for 20 percent of the total planned investment in 2013/14. UK emerged third with \$135 million planned investment. India however contributed the largest number of FDI projects accounting for 26 percent (121 projects) of the total projects in 2013/14. China followed with 53 projects. The major sector for projects in number remained Manufacturing. Conversely, Mining and Quarrying registered the largest planned investment value amounting to US\$ 748 million while Manufacturing yielded the largest actual investment during 2013/14 registering \$70million. FY 2013/14 witnessed a decline in planned employment while actual employment created by operational projects by end of June 2014 stood at 8,851 jobs.

5.3 Forecasts for 2014/15

Uganda's macroeconomic environment has improved as reflected by a further reduction of inflation to 4.9 percent by end of June 2014. Investor confidence has grown gradually although investors remain conscious of the prevailing commercial lending rates which stood at 21.41 percent by end of June 2014.

In FY 2014/15, UIA projects further growth in the number of projects particularly Ugandan owned projects in response to the ongoing regional and district investment promotional efforts as well as SME activities. More projects licensed during the last quarter of 2013/14 are expected to commence operation since several projects were under implementation by end of June 2014. Investments from India and China are expected to rebound as investors continue to take advantage of emerging opportunities in the extractive industry, manufacturing and construction services.
